

Observation log (ABC)

The ABC log is a simple way to observe without judging. It helps find patterns and lets the team support you better.

- A — Antecedent: what was happening just before (place, people, activity, changes).
- B — Behavior: what you observed, in neutral, concrete words, without labels.
- C — Consequence: what happened afterward and how the situation calmed down.

- 1 Note little and soon: a few lines in the moment beat a perfect text later.
- 2 Describe what you would see in a video, not what you imagine they felt.
- 3 After several entries, look for patterns: recurring times, settings or triggers.
- 4 Bring the log to appointments: it is a gift of information for the team.

No blame. The log is not about “behaving well”. It is about understanding needs to respond with more calm and care.

Date and time	A · Antecedent	B · Observed behavior	C · Consequence
