

## Plain-language glossary

Each need usually has a type of professional who supports it best. This matrix is a compass, not a rule: support often works as a team.

| What you observe         | Who usually supports           | How it helps                                         |
|--------------------------|--------------------------------|------------------------------------------------------|
| Language & communication | Speech therapy                 | Speech, comprehension and alternative communication. |
| Autonomy & daily life    | Occupational therapy           | Dressing, eating, writing and sensory regulation.    |
| Movement & posture       | Physiotherapy                  | Strength, balance and coordination.                  |
| Emotions & bonding       | Psychology                     | Emotional regulation and strategies for home.        |
| School learning          | Learning support / Special ed. | Study strategies and accommodations.                 |
| Sleep, feeding & health  | Pediatrics / Neuropediatrics   | Medical and developmental follow-up.                 |

General guidance on where to start.

Neuromundi · Supportive content; it does not replace professional assessment.
